Main learnings

The biggest difficulty was definitely networking the docker containers. Had a lot of situations where tests would work locally, but not in the pipeline because of connection issues. I'd say that

doubled the time I did this project for. So as a main learning I'd say to learn how to configure container networks.

I also got to know that docker has pull limits during trying to fix the networking.

Amount of effort used

I'd estimate the time used was somewhere around 25 hours.
